Electron J. 331:323-330(1998)

E. PUNCTION: Coats the epithelia of the intestines, airways, and other mucus membrane-containing organs. Thought to provide a protective, lubricating barrier against particles and infectious agents at mucosal surfaces.

C. SUBUNIT: Multimeric.

C. SUBLINIT: Multimeric.

C. SUBLINITY: Contains 1 VWFC domain.

C. SIMILARITY: Contains 3 VWFD domains.

SUBCELLULAR LOCATION: Type I membrane protein, exclusively on the apical region of the sperm head (By similarity).
TISSUB SPECIFICITY: In testis, primarily in haploid spermatids.
Not in lung, liver, heart, spleen, brain, kidney, epididymis.
DOMAIN: The MAM domains probably mediate sperm adhesion to the
                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   DOMAIN: During sperm migration through the reproductive tracts, the mucin-like domain might inhibit inappropriate trapping of Spermatozoa or promoting adhesion to the oviductal isthmus. DOMAIN: The VWPD domains 2 and 3 may mediate covalent oligomerization (By similarity to human intestinal mucin MUC2). PTM: THE MAM DOMAINS AND THE MUCIN-LIKE DOMAINS ARE MISSING PROCESSING MIGHT OCCUR DURING SPERM MATURATION AND/OR

J. Invest. Dermatol. 0.0-0(2003)
-: FUNCTION: In the hair cottex, hair keratin intermediate filaments are embedded in an interfilamentious matrix, consisting of hair keratin-associated protein (KRTAP), which are essential for the formation of a rigid and resistant hair shaft through their extensive disulfide bond cross-linking with abundant cysteine extensive of hair keratins. The matrix proteins include the high-sulfur and high-glycine-tyrosine keratins.
-: SUBUNIT: Interacts with hair keratins.
-: TISSUE SPECIFICITY: Expressed exclusively in a narrow region of the middle portion of hair fiber cuticle.
-: SIMILARITY: Belongs to the KRTAP type 10 family.

Reprod. 65:1691-1700(2001).
-!- FUNCTION: Binds in a species-specific manner to the zona pellucida of the egg. May be involved in gamete recognition and/or signaling (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               -!- SUBUNIT: Probably forms covalent oligomers (By similarity).
-!- SUBCELUIAR LOCATION: Type I membrane protein, exclusively on the apical region of the sperm head (By similarity).
-!- DOMAIN: The MAM domains probably mediate sperm adhesion to the zona pellucida.
-!- DOMAIN: During sperm migration through the reproductive tracts,
                                      -!- SUBCELLUTAR LOCATION: Integral membrane protein (Probable).
-!- SIMILARITY: Belongs to the ZIP transporter (TC 2.A.5) family.
KE4/Catsup subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Eukaryotă, Metazoa, Chordata, Craniata, Vertebrata, Euteleostomi,

   the mucin-like domain might inhibit inappropriate trapping of spermatozoa or promoting adhesion to the oviductal isthmus.

-!- DOMAIN: The VWFD domains 2 and 3 may mediate covalent oligomerization (By similarity to human intestinal mucin MUC2).
-!- SIMILARITY: Contains at least 2 MAM domains.
-!- SIMILARITY: Contains 5 VWFD domains.
-!- SIMILARITY: Contains 1 RGF-like domain.

J. Clin. Invest. 88:1005-1013(1991).

- FUNCTION: Coate the epithelia of the intestines, airways, and other mucus membrane-containing organs. Thought to provide a protective, lubricating barrier against particles and infectious of agents at mucosal surfaces.

- SIBUNIT: Multimeric.

- SIBUNIT: Multimeric.

- SIBURIT: Multimeric.

- TISSUE SPECIFICITY: COLON, SMALL INTESTINE, COLONIC TUMORS, BRONCHUS, CERVIX AND GALL BLADDER.

- FROW ALL CYSTEINE RESIDUES ARE INVOLVED IN INTRACHAIN OR INTERCHAIN DISULFIDE BONDS (BY SIMILARITY).

- POLYMORPHISM: The number of repeats is highly polymorphic and varies among different alleles.

- SIMILARITY: Contains 1 TIL (Trypsin inhibitory-like) domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    "The human MUC2 intestinal mucin has cysteine-rich subdomains located both upstream and downstream of its central repetitive region."; J. Biol. Chem. 267:21375-21383(1992).

Novel monomeric monocyclic peptide, used to interfere with angiogenesis, or lymphangiogenesis, is produced by cyclizing a peptide loop fragment from an exposed loop of a growth factor protein by oxidizing the cysteine residues.

Claim 49; Page 32; 102pp; English.

The sequence represents a monomeric monocyclic peptide of the invention, whose 3-dimensional structure is modelled on the expose loop of human VEGFD (vascular endothelial growth factor). The invention relates to a method of producing a monomeric monocyclic peptide by a measuring betabeta carbon separation distances on opposite antiparallel strands of a

Example 1; SEQ ID NO 23757; 1069pp; English.

```
peptide loop fragment from an exposed loop of a growth factor protein and cyclising the peptide by oxidising the cysteine residues. The monocyclic peptides, dimeric bicyclic peptides (comprising 2 linked monocyclic peptides) and a cyclic peptide with at least one anino acid deleted prior to cyclisation are used to interfer with angiogenesis, consistent on a lymphangiogenesis in a mammal with a condition carried by angiogenesis, neovascularisation or lymphangiogenesis, neovascularisation or lymphangiogenesis. The condition is diabetic retinopathy, psoriasis, arthropathy, cerebrovascular accident, post-angioplasty restenosis, heat or cold cramma, substance-induced melignant or benign tumour, post-recovery carried angiogenic dysfunction, diabetes induced neovascular cyclic hormone-related angiogenic dysfunction, diabetes induced neovascular cyclic in a mammal (the mammal has a condition obtained neovascular commulation in peripheral limbs or in lungs, peritoneal cavity, pleura, cycumulature. The monomeric and bicyclic peptides are used to interfere cyasculature. The monomeric and bicyclic peptides are used to interfere with at least one biological activity induced by VEGF, VEGF-C or -D and chrotic inflammation, especially rheumatoid arthritis, psoriasis and distance of all the combination with an anti-inflammatory agent, to treat a chronic rifflammation, especially rheumatoid arthritis, psoriasis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    SAPHO syndrome, synovitis; acne; pustulosis; hypertosis; osteomyelitis; uveitis; endophthalmitis; bone; joint; central nervous system; ELISA; inflammatory lesion; acne vulgaris; enzyme linked immunosorbent assay; dermatological; osteopathic; neuroprotectant.

Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by the treatment, prevention and diagnosis of medical conditions caused by acnes. The disorders include SAPHO syndrome (synovitis, acne, busulosis, hypertosis and osteomyellitis), uveitis and endophthalmitis. Uservous system, however it is particularly involved in the inflammatory researce or absence of P. acnes in a patient comprises contacting the presence or absence of P. acnes in a patient comprises contacting a presence or absence of P. acnes in a patient comprises contacting a competition and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies contacting the amount of bound protein in the sample. The competition for a canes proteins. These antibodies and character treat P. acnes proteins. These antibodies and character expression and activity of P. acnes polypeptides and character treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes polypeptides and character this patent did not form part of the printed specification, but was for the contained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New Propionibacterium acnes polypeptides and polynucleotides encoding the polypeptide, useful for diagnosing, preventing or treating acne vulgaris, or for stimulating an immune response specific for a P. acnes protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to an isolated polynucleotide (ACF64435-ACF64733)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Maisonneuve JL;

The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed control of (II) are to treat disease states involving (II). (II) is cativity of (II) or to treat disease states involving (II). (II) is useful in tissue, as molecular weight markers and as a food cuplement. (II) and its binding pattners are useful in medical imaging of supplement. (II) and its binding pattners are useful in medical imaging of supplement. (II) and its binding pattners are useful in medical imaging of supplement. (IC) and its binding pattners are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in capporations in the private of data and products dependent on DNA and and to produce other types of data and products dependent on DNA and and confidence other types of the and products dependent on DNA and and acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in correct the produce of the sequences.

The produce of the sequences of the sequence are for this correct or and to produce of the produce of the sequence of the sequence of the sequence of the sequences of the sequence of the sequ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; nootropic; neuroprotective; cytostatic; dermatological; virucide;

Rosen CA, Barash SC, Ruben SM (HUMA-) HUMAN GENOME SCI INC

WPI; 2001-541565/60. N-PSDB; ABA12368.

Nucleic acids encoding 3224 human nervous system antigen polypeptides, useful for preventing, diagnosing and/or treating nervous system cancers and metastases.

Claim 11; SEQ ID NO 4699; 1701pp + Sequence Listing; English.

The invention relates to novel genes (ABA11004-ABA21534) and proteins (ABB14678-ABB18001) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow,

breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parasitic infections. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences .; 0 Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by P. acnes. The disorders include SAPHO syndrome (synovitis, acne) pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. P. acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention SAPHO syndrome; synovitis; acne; pustulosis; hypertosis; osteomyelitis; uveitis; endophthalmitis; bone; joint; central nervous system; ELISA; inflammatory lesion; acne vulgaris; enzyme linked immunosorbent assay; dermatological; osteopathic; neuroprotectant. Gaps Propionibacterium acnes polypeptides and nucleic acids useful for vaccinating against and diagnosing infections, especially useful for 0; Bhatia A; DB 4; Length 64; 68; 1; Indels Propionibacterium acnes immunogenic protein #25135. ```
The invention relates to an isolated polynucleotide (ACF64435-ACF64733) encoding a Propionibacterium acnes protein. The invention also relates to polypeptides encoded by the polynucleotides (ABMS624-ABM64536) and to additionally encompasses expression vectors and host cells comprising a polyputaleotide of the invention; antibodies against polypeptides of the invention; antibodies against polypeptides of the invention; antibodies against polypeptides of the invention; an immune response specific for a P. acnes polypeptide and an isolated T cell population comprising T cells prepared via this method; a vaccine composition (comprising P. acnes polypeptides, polymucleotides, antibodies, fusion proteins, T cell populations, or antigen-presenting cells that express the polypeptide); a method and kit for detecting or determining the presence or absence of P. acnes in a
and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies specific for practise. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by enzyme linked immunosorbent assay (ELISA). Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           polypeptide, useful for diagnosing, preventing or treating acne vulgaris, or for stimulating an immune response specific for a P. acnes protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New Propionibacterium acnes polypeptides and polynucleotides encoding
                                                                                                                                                                                                                                                                                               Gaps

patient; and a method for inhibiting the development of P. acnes in a patient. The P. acnes polypeptides, polynucleotides, antibodies, fusion proteins, T cell populations or antigen-presenting cells that express the colypeptides are useful for diagnosing, preventing or treating acne ulgaris, or for stimulating an immune response specific for a P. acnes protein. The polynucleotides can also be used as probes or primers for nucleic acid hybridisation. The vaccine composition is useful for the stimulation of an immune response against P. acnes, or for treating acne, and the kit is useful for performing a diagnostic assay. The present and the kit is useful for performing a diagnostic assay. The present cading frame) contained within the P. acnes polynucleotides of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences 85.7%; 6; Conservative Query Match Best Local Similarity Sequence 91 AA; Matches 8x88888888888888888

WPI; 2001-639362/73 N-PSDB; AAS94390 New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity

claim 20; SEQ ID NO 60562; 103pp; English.

The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oilgomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food

The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders 0 supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for traating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleoride sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences Gaps New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess Human; chromosome mapping; gene mapping; gene therapy; forensic; food supplement; medical imaging; diagnostic; genetic disorder. 0 Score 36; DB 4; Length 4561; Pred.         ö
involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic patent did not appear in the printed specification, but was obtained in ftp.wipo.int/pub/published_pot_sequences

                                                                          Homo sapiens
                                                                                                                                         02-AUG-2001
        Isolated nucleic acid molecule encoding a reproductive system antigen is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention provides the protein and coding sequences of a number of human reproductive system related antigens. These can be used in the prevention and treatment of reproductive system disorders, including cancer. The present sequence is a protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; testicular antigen; testes; cancer; metastasis; immune disorder;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     used in preventing, treating or ameliorating a medical condition.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 11; SEQ ID NO 5223; 1297pp + Sequence Listing; English.

Novel prostate gland antigen, Seq ID No 158.

(first entry)

21-NOV-2001

```
The present invention provides the protein and coding sequences of 973 muman testicular antigens, and fragments of their genomic sequences. The sequences can be used in the treatment of cardiovascular, urinary system, reproductive system, immune, respiratory, neurological and system, gastrointestinal disorders, infections, and particularly cancer, especially testicular cancers. The present sequence is a protein of the
                                                                                         Nucleic acids encoding 973 human testicular antigen polypeptides, useful for preventing, diagnosing and/or treating testicular cancer.
                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                            .;

Novel isolated prostate gland related polypeptide useful for diagnosis and treatment of disorders of prostate such as prostatodystonia, prostatosis, prostatitis, benign prostatic hypertrophy and malacoplakia

Claim 1; SEQ ID NO 158; 512pp; English.

The invention relates to novel isolated prostate gland related nucleic acids (I) and polypeptides (II). (I) and (II) are useful for diagnosis, prognosis, prevention, and/or treatment of diseases and/or disorders of the prostate such as acute non-bacterial prostatitis, chronic non-bacterial prostatitis, prostatodystonia, prostatosis, granulomatous prostatitis, malacoplakia, benign prostatic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                  Isolated nucleic acid molecule encoding a reproductive system antigen is used in preventing, treating or ameliorating a medical condition.
                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention provides the protein and coding sequences of a number of human reproductive system related antigens. These can be used in the prevention and treatment of reproductive system disorders, including cancer. The present sequence is a protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            .

polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by the treatment, prevention and diagnosis of medical conditions caused by a cnes. The disorders include SAPHO syndrowitis, acre, p. acnes. The disorders include SAPHO syndrowitis, acre, p. acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory resence or absence of P. acnes in a partient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies of specific for P. acnes proteins. These antibodies can be used as downregulate expression and activity of P. acnes polypeptides and activity of P. acnes presence of the reample of the protein in the sequence data for therefore treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes presence. for example, by charmed immunosorbent assay (ELISA). Note: The sequence data for this patent did not form part of the printed specification, but was the content of the printed specification, but was
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic

The invention relates to an isolated polynucleotide (ACF64435-ACF64733) encoding a Propionibacterium acnes protein. The invention also relates to encoded by the polynucleotides (ABM35624-ABM64536) and to immunogenic fragments of P. acnes polypeptides. The invention additionally encompasses expression vectors and host cells comprising a additionally encompasses expression vectors and host cells comprising a colympletide of the invention; antibodies against polypeptides of the invention; tuston proteins comprising a polypeptide of the invention; a method for stimulating an immune response specific for a P. acnes

CC polymucleotides, antibodies, fusion proteins, T cell populations, or contigen-presenting cells that express the polypeptide); a method and kit for detecting or determining the presence of P. acnes in a patient; and a method for inhibiting the development of P. acnes in a patient; and a method for inhibiting the development of P. acnes in a proteins. T cell populations or antigen-presenting cells that express the polypeptides, polypucleides, antiponent of P. acnes in a proteins, T cell populations or antigen-presenting cells that express the volypeptides are useful for diagnosing, preventing or treating acne volgaris, or for stimulating an immune response specific for a P. acnes or primers for nucleic acid hybridisation. The vaccine composition is useful for the stimulation of an immune response against P. acnes, or for treating acne, cand the kit is useful for performing a diagnostic assay. The present cand the kit is useful for performing a diagnostic assay. The present cand the kit is useful for performing a diagnostic assay. The present cand the kit is useful for performing a diagnostic assay. The present cand the kit is useful for performing a diagnostic assay. The present cand the kit is useful to this patent did not form part of invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly and the printed specifi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New Propionibacterium acmes polypeptides and polymucleotides encoding the polypeptide, useful for diagnosing, preventing or treating acme vulgaris, or for stimulating an immune response specific for a P. acmes protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Maisonneuve JL;

                                                                                                                                                                                                                                                                                                                                                                                                                      Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                -I-TISSUE SPECIFICITY: Weakly expressed in most tissues, except in brain. Expressed at intermediate level in brain, including cerebellum, substentia nigra, hippocampus and feral brain.
-I-DISEASE: Defects in CSMD1 may be a cause of oral and oropharyngeal squamous cell carcinomas (OSCCS). Ref.5 and Ref.6 are however in disagreement: while Ref.6 considers CSMD1 as a strong candidate for OSCCS, Ref.5 thinks it is not.
-I-SIMILARITY: Belongs to the CSMD family.
-I-SIMILARITY: Contains 14 CUB domains.
                                                                                                                                                                                                                                                                                                                                                                      CUB AND SUSHI MULTIPLE DOMAINS PROTEIN 1.
                                                                                                                                                                                                                                                                                                                                                   Sushi, Alternative splicing.
